Fyndiq Prestashop Module

User guide. Version 2.0

Introduction

This document is intended for you as a merchant to quickly get started with the Fyndiq Prestashop Module. It contains step by step instructions for installing and setting up the module and how to use it.

Fyndiq Merchant Support

For any questions, problems or suggestions regarding your Seller Account or the Fyndiq Magento Extension, please contact our team as follows.

For questions regarding selling on Fyndiq, please contact us on: seller@fyndiq.com
For technical questions regarding the API, please contact us on: integration@fyndiq.com

Prerequisites

This document assumes that the following conditions are met before installing the extension:

- Prestashop 1.4 or above
- PHP 5.2 or above
- MySQL 5.0 or later
- Proper access to the Prestashop installation is available, so the plugin can be installed
- A merchant account has been created on Fyndiq
- An API V2 token has been created for that account on the Fyndiq Merchant Pages

Please note: Kindly inform Fyndiq Seller Support that you start integrating with the Magento Extension. Every Seller Account will stay in test mode until products have been uploaded and at least one test order has been made (and both checked successfully). Seller Support will activate your account for sales afterwards.

Seller account

The first step to start using the Fyndiq marketplace is to set up a seller account. You can do so at this page: https://fyndiq.se/merchant/create_account/

WELCOME

FYNDIQ

Create the account

The form for creating your account is in English, the fields marked by * are mandatory and described below:

Your company

- Name of company
- VAT registration number
- Company address

Contact information

- First name
- Family name
- Phone number
- E mail address

Your webshop on Fyndiq

- Webshop name on Fyndiq
- Telephone support
- Return address
- Webshop return country
- Preferred language
- How did you heard about us?

Your account information

- User name
- Password
- Password again for verification

You do not commit to anything by creating an account.

Create an API token version 2

The API token is used for verification between your e commerce platform and Fyndiq. You create the token when you are logged in at the merchant page at:

https://fyndiq.se/merchant/

Go to Settings and in the sub menu API. Click the button labelled "**Create an API v2 Token**". Make sure to use the API v2 Token as marked in the image below.

When the token is created, you can see it under "**Current API Token**". It is then used together with the username you chose when creating the account as API credentials.

Note that your username is also visible under API Username.

Installation and configuration

All files needed for the installation of the extension can be found on our developer pages together with this **User Guide** and **Installation Instructions**:

Installation

http://developers.fyndiq.com/fyndiq-prestashop-module/
See installation instructions.

Configuration

Multistore Configuration

PrestaShop supports multistore configuration, which has impact on the export of your products to Fyndiq. We recommend that you assign your root category for each of your stores available so that the products are exported to the proper feed. Please see the PrestaShop documentation for reference on how to set this up.

Connecting the Module

Before you can start using the Fyndiq PrestaShop Module, it has to be connected to the Fyndiq API with your Username and API Token as described in the previous section. This only has to be done once, when you first enter the module. The settings will be automatically saved for later use.

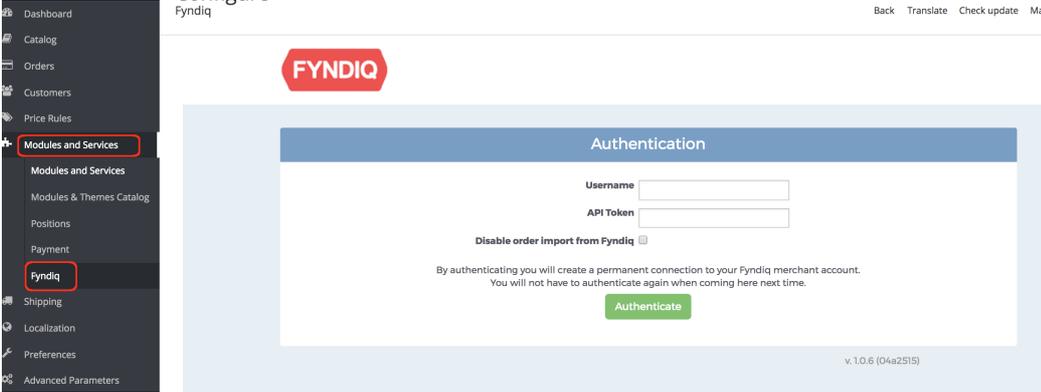

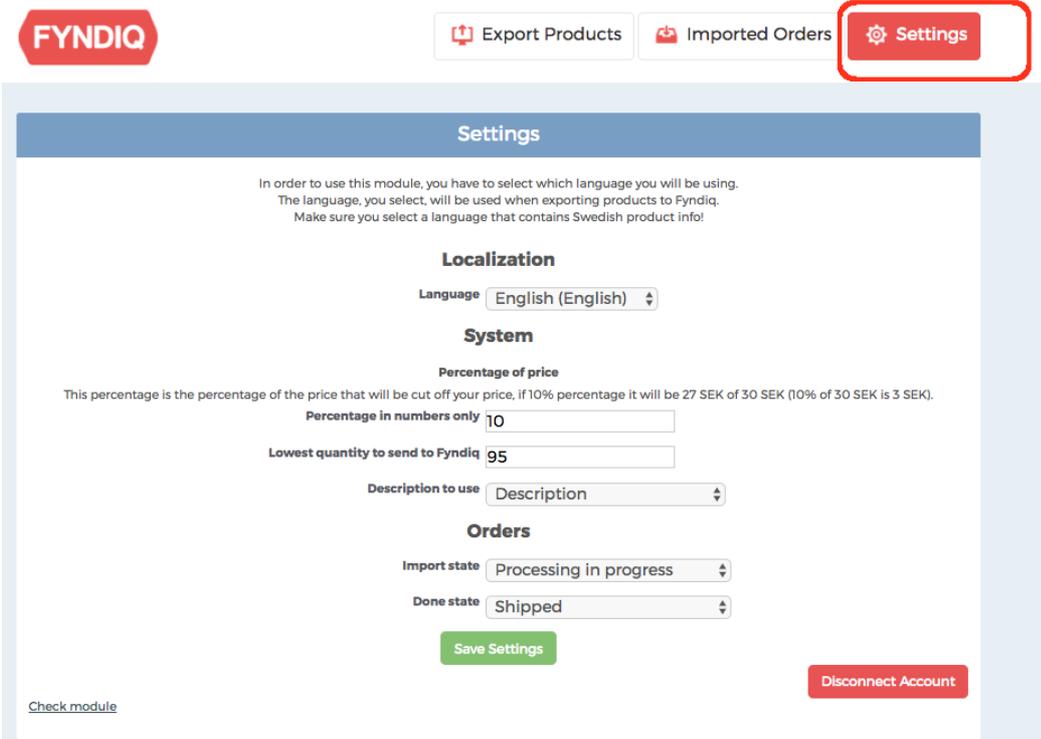

On the settings page, please enter the following data:

- Username - the username of your Fyndiq Merchant Account
- APIv2 Token - the API Token generated in your Fyndiq Seller Account

Settings

In the following page Settings you can specify general settings regarding the Fyndiq PrestaShop Module like following:

- **Percentage in numbers only**
the discount set on all products by default. This can also be individually set on the product later on.

- **Lowest quantity to send to Fyndiq**
To avoid bad stock you have the possibility to define a different minimum stock level than 1, which is particularly of interest for Multishop -users.

- **Description to use**
Determine which PrestaShop database value will be used for product descriptions on Fyndiq. This can be different depending on how your are using your PrestaShop system.

- **Import state and Done state**
The desired status values for imported and completed orders. Please adjust those values, if needed for your specific workflows. What the states are and how to use them is not within   the scope of this document.

Save Settings

To continue, please   click:

# Create   products

General requirements

The following requirements must be met for your PrestaShop products to be available in the Fyndiq PrestaShop module:

- Must be a Standard product.
- Must have a unique SKU (reference code).
- Must have a valid tax class.
- Must have a valid base image of at least 200x200 pixels.
- Must be enabled.
- Must be assigned to a category.
- Must have a description which is at least ten characters in length.
- Must have a name which is at least five characters in length.

Create a product

To create a product you simply need to click **add a new product** button at the top right corner of your Prestashop admin:

To better understand the process of creating a product, below is a walkthrough of the necessary steps for creating a product. You can find more information regarding product creation from [Prestashop support pages](#).

Information

- Product type must be set to Standard.

- The name filled in must contain at least 5 characters and the description at least 10 characters.

- Reference Code must be entered and will be used as unique identifier of your product.

- Save the product so you can continue with other product settings.

Price settings

Navigate to the price settings on the left hand menu.

Prices can be set with decimals separated by period (.).

Your products must have a proper TAX rule. All prices are set including taxes. This can be changed or updated if you go to **Create a new tax** link.

Associations (Categories)

Each product has to have a category assigned. Depending on where in the category structure the product should belong, click the checkboxes.

Quantities

Needs to be a value greater than zero.
Please note that it has to be a value bigger than the value you set in **Lowest quantity to send to Fyndiq** in the general module settings.

Images

In order for a product to be uploaded to Fyndiq it requires to have at least one image assigned to the product. Navigate to Images settings in the menu on the left hand side. Please note that the minimum size of an image must be at least 200 x 200 pixels.

All products must have a Base Image assigned. To assign a proper base image to a product, please select the **Cover Image** field for the main product image.
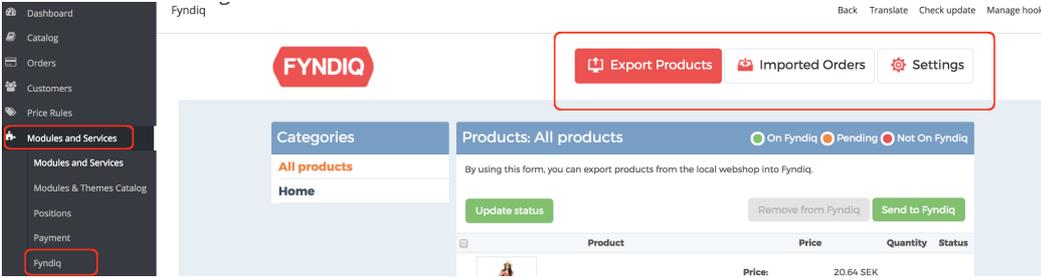

Save the product

You can save the product and the different settings as you create the product by clicking on the **Save** (or **Save and stay**) button at the bottom of the settings.
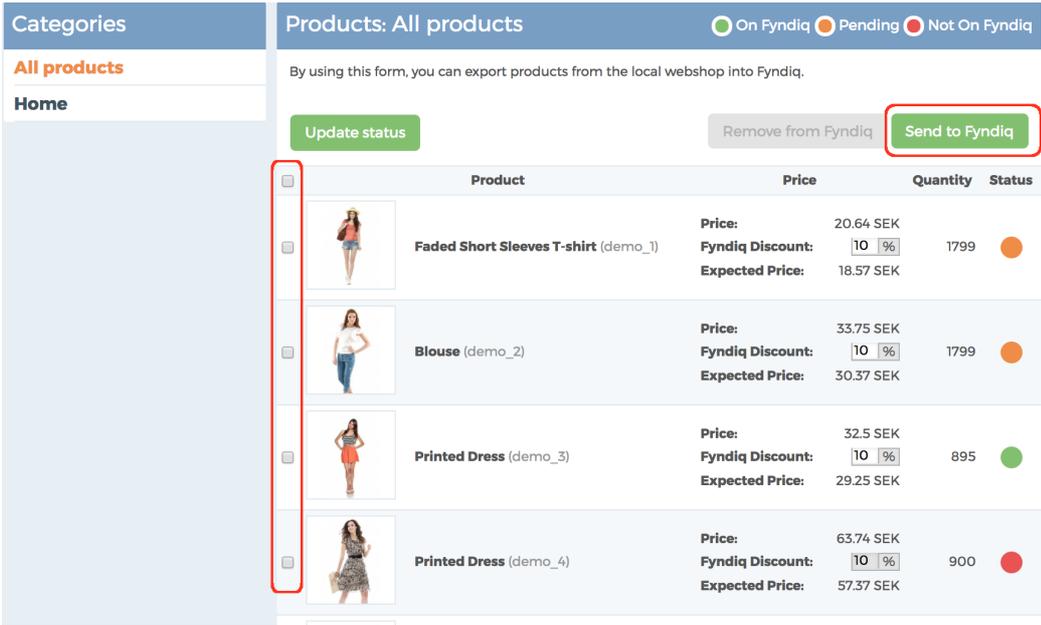

Export products to Fyndiq

To start uploading products to Fyndiq, please go to **Modules and Services > Fyndiq** in your PrestaShop Admin.

You can find three resources on main view of the Fyndiq PrestaShop Module. Products, Orders and Account settings.

By default, the main view of the module will show products from all categories; 50 products per page. To start uploading products to Fyndiq, simply select the checkbox to the left of the product image or use the checkbox in the product list header to select all with just one click.

Then click the **Send to Fyndiq** button to add the selected products to the export.

Please note: As described above only products that hit the required facts as described in General Requirements will be exported.
To remove products from Fyndiq simply select the products you want to remove and press the **Remove from Fyndiq** button.

Your product upload will be processed by Fyndiq at least once per hour, so it may take some time until the products are showing on your Fyndiq Account.

You can see the current status for each of your products by checking the status color:

- Green - The product is currently available for sale on Fyndiq.
- Red - The product is currently not selected for upload to Fyndiq.
- Orange - The product is pending currently either waiting for upload or removal from Fyndiq or it is currently sold out.

You can update the status for all products by pressing the **Update status** button.

To filter products by specific categories, simply click on the local PrestaShop categories you wish to filter. As explained above, the connection between categories and products depends on which categories you have selected for a product. If there are products that are not shown in the correct category, always check which category they are connected to.

Please note: there is no possibility to map your webshop categories to Fyndiqs in Prestashop. You need to assign the categories directly in Fyndiq Admin.

Merchant Pages

You find your merchant page where you created your API Token, https://fyndiq.se/merchant/, login with the credentials you created in the beginning.

Click on **Products** to verify if your products are uploaded:
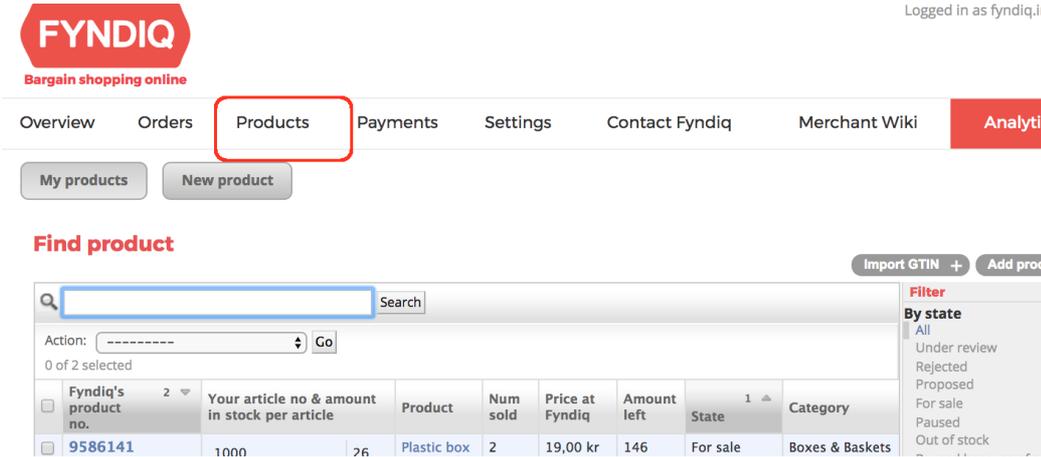

Create test order

To create a test order and make sure everything works choose a product, select "**Create test orders for test feed**" in the drop down menu and click **Go**.
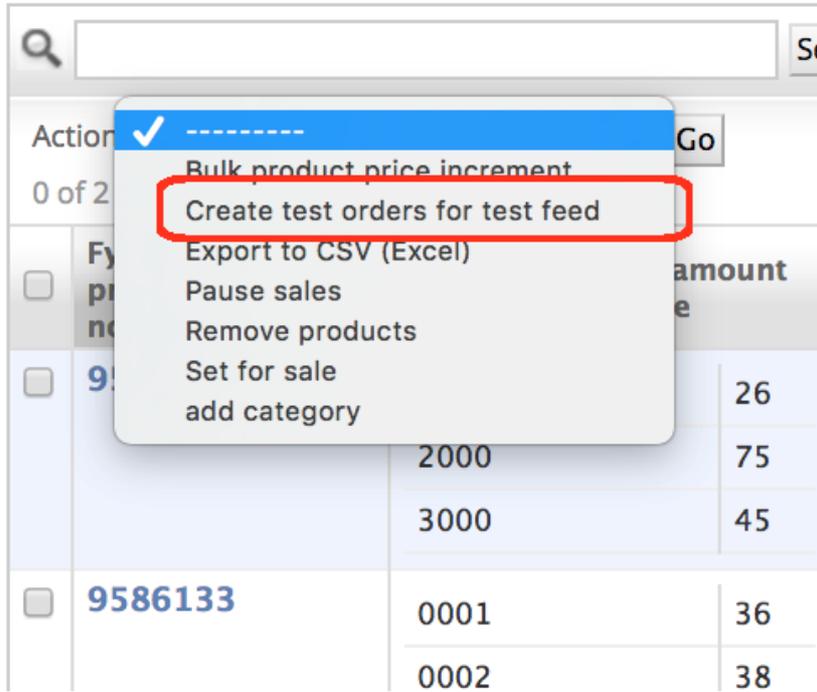

Enter an amount and select the product, then click **Create**. You will return to the product page and see a message stating your order were a success.

Return to your Prestashop Admin Panel and follow the next chapter to make sure your test order is imported.

Please note: Test orders can only be created as long as your account is in test mode.

Import and handle orders

Orders you receive on Fyndiq are by default automatically imported into your PrestaShop installation. They will then be shown in your Fyndiq PrestaShop Module orders view.

Imported Orders

Mark As Done   Get Delivery Notes

They will also showing in your default PrestaShop orders list.

Orders

	ID	Reference	New client	Delivery	Customer	Total	Payment	Status	Date	PDF
☐	20	AQICTNVPB	No	Sweden	F. Orders	29,25 kr	Fyndiq	Processing in progress	08/31/2017 09:43:33	🔍 View
☐	19	YEEVXPLJQ	No	Sweden	F. Orders	101,25 kr	Fyndiq	Processing in progress	03/06/2017 14:14:57	🔍 View
☐	18	IJJBUNZWZ	No	Sweden	F. Orders	101,25 kr	Fyndiq	Processing in progress	03/06/2017 14:14:57	🔍 View
☐	17	TRZRDVFVC	No	Sweden	F. Orders	101,25 kr	Fyndiq	Processing in progress	03/06/2017 14:14:57	🔍 View

You can always force an order import in the PrestaShop Fyndiq Module by clicking the Import Orders button in the Imported Orders tab.

To mark orders that you have processed simply mark the checkbox to the left of the Order column and click on the **Mark as done** button. Either click the checkbox on top to select all or select individual orders on the order row to do so. The Status for those orders will then be set as Shipped (or as whatever you defined it in the general settings) in the Fyndiq module.

| | Imported Orders | | | | | | Manual Order Import |

					Mark As Done	Get Delivery Notes	By clicking this button, you can import all orders from Fyndiq into the local webshop.
	Order	Fyndiq Order	Price	Qty	Status	Created	
	20	4620	29.25	1	Processing in progress	2017-08-31 (9:43:33)	Import Orders
	18	4164	101.25	1	Processing in progress	2017-03-06 (14:14:57)	

The same goes for Get Delivery Notes. Select the individual orders or select all to show the delivery notes that need to be printed and click on the **Get Delivery Note** button.

Clicking on the order id opens the PrestaShop order details view.

Activate account

When everything works as expected you have to activate your account to be able to start selling your products on Fyndiq.

Please remember: Your Fyndiq account will stay in test mode until your first product upload and a test order have been completed.

Please contact our support for account activation or whenever questions or problems come up.. See Fyndiq Merchant Support on page two for contact information.
